Sketch 1 — "Maya, the College Student"

Persona: 19, busy, on a budget. Wants quick, free climate actions.

PERSONA

Maya, 19

- Sophomore, USC
- Lives in dorm
- No car, takes bus
- Cares about planet
- Tight budget
- On her phone a lot

"I want to help, but where do I even start?"

SCENARIO

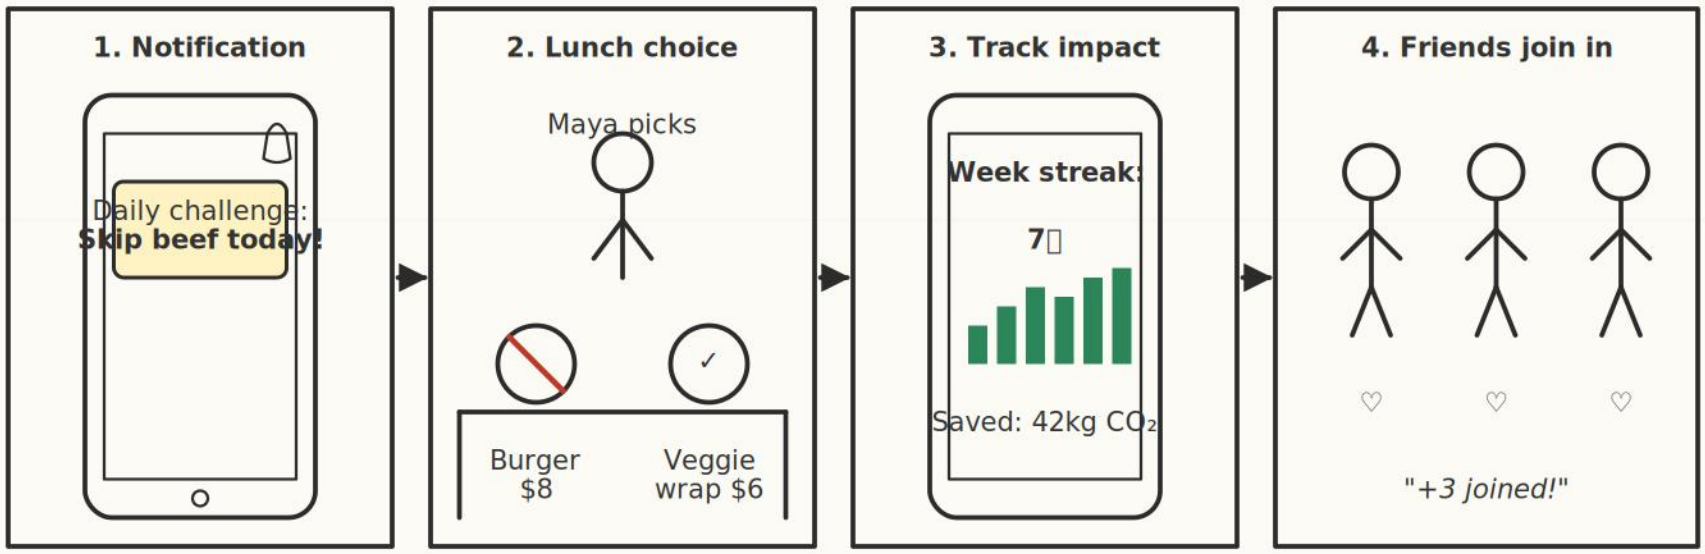
Maya is walking to class and opens our app on her phone. She sees a daily challenge: "Skip beef today — save 6kg of CO_2."

She taps "Accept", and the app reminds her at lunch. She picks the veggie wrap instead of the burger.

The app adds 6kg saved to her weekly streak. She shares it on her story — 3 friends join the challenge.

→ Outcome: Small action, social ripple effect

STORYBOARD



KEY INSIGHTS — what this design must do

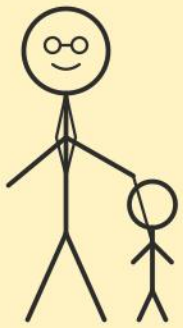
- ✓ Mobile-first — Maya lives on her phone
- ✓ One-tap actions — no friction, no decision fatigue
- ✓ Show impact in real numbers (kg CO_2) so it feels meaningful
- ✓ Social sharing built in — friends + streaks drive habit

QUICK UI SKETCH

Sketch 2 — "David, the Working Parent"

Persona: 38, two kids, owns a home. Wants family-friendly impact.

PERSONA



David, 38

- Works full-time
- Two kids (5 + 8)
- Owns a house in suburbs
- Drives an SUV
- Worried about kids' future
- Wants real, big changes

"What's the ONE thing my family can do?"

SCENARIO

It's Sunday morning. David sits down with coffee and opens our app to do a quick "household check-up."

He answers 5 questions: home size, heating type, cars, commute, eating habits.

The app shows: "Your home heating = 40% of your family's footprint. Switching to a heat pump could save 4 tons CO_2/year and $800 on bills."

→ Outcome: One big decision > many small ones

STORYBOARD

1. Sunday coffee

App opens

2. Quick survey

Q1: Home size?

2,400 sq ft ▼

Q2: Heating?

Natural gas ▼

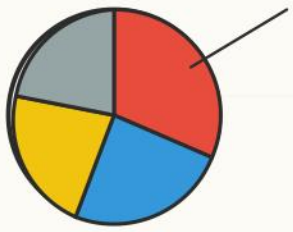
Q3: # of cars?

2 (1 SUV, 1 sedan) ▼

~5 min total

Calculate

3. The big insight



Heating: 40% ←
biggest slice!

FOCUS HERE

4. Action plan

Heat Pump Upgrade

Save 4 tons CO_2/yr
Save $800/yr on bills
$2k tax credit available

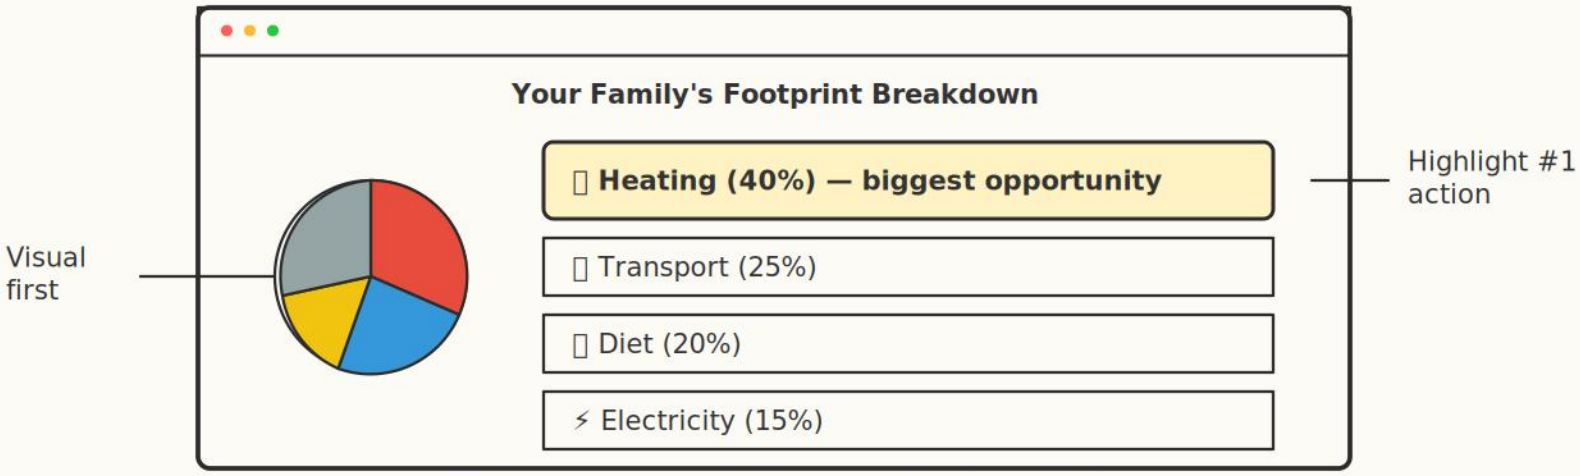
Find Local Installers

□□□□ Family on board!

KEY INSIGHTS — what this design must do

- ✓ Desktop / tablet first — David has time on weekends, not on the go
- ✓ Identify ONE biggest opportunity — don't overwhelm with options
- ✓ Pair impact (CO_2) with money savings — speaks to homeowner mindset
- ✓ Connect to local installers/programs — reduce friction to action

QUICK UI SKETCH (dashboard)



Sketch 3 — "Sarah, the Small Business Owner"

Persona: 45, owns a coffee shop. Wants to attract eco-conscious customers.

PERSONA

Sarah, 45

- Owns "Sunrise Coffee"
- 4 employees
- Tight margins
- Customer-loyalty focused
- Wants to do good
- Needs ROI proof

"*Going green sounds great — but does it pay off?*"

SCENARIO

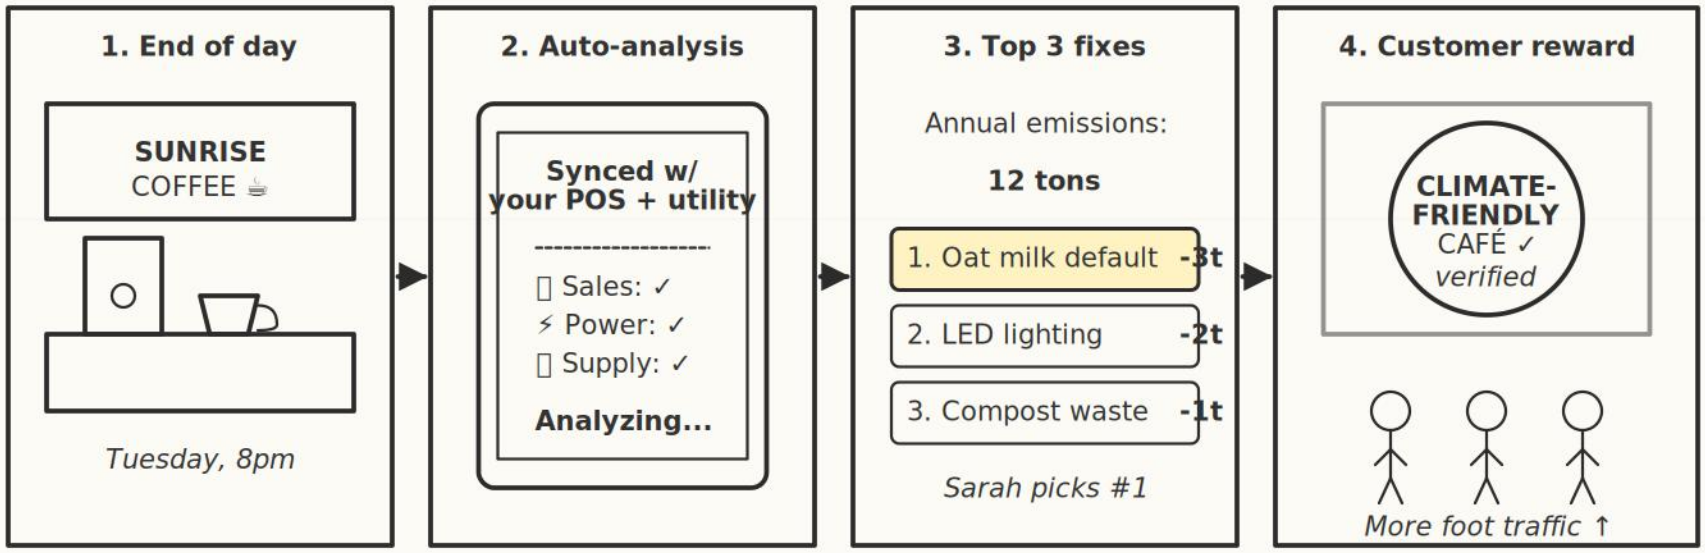
Sarah is closing the shop on a Tuesday night. She opens our app on her tablet behind the counter.

It connects to her POS and utility data, then shows: "Your café emits 12 tons CO_2/year. Top 3 fixes: switch to oat milk default, LED lights, compost waste."

She picks "oat milk default." The app generates a window decal: "Climate-Friendly Café — verified."

→ Outcome: Sustainability becomes a marketing asset

STORYBOARD



KEY INSIGHTS — what this design must do

- ✓ Auto-pull data — owners are too busy to enter numbers manually
- ✓ Rank fixes by impact AND cost — show ROI clearly
- ✓ Reward action with marketing asset (verified decal) — turn doing good into customer draw
- ✓ Bookkeeper-friendly export so changes can be tracked at year-end
